

# IMPORT HUB – E-COMMERCE ORDER MANAGEMENT SYSTEM

## OBJECTIVE

The IMPORT HUB project is an e-commerce order management database system developed to make purchasing imported products easy, convenient, and reliable. The system manages customers, products, categories, shopping carts, orders, payments, inventory, and reviews.

The main aim is to provide a well-organized platform for purchasing imported chocolates, snacks & cookies, beverages, instant noodles & foods, and gift hampers while helping the administrator efficiently manage business operations.

## KEY REQUIREMENTS AND FINDINGS

| Analysis Area       | Finding                                                                            | Insight                                                                   |
|---------------------|------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Customer Management | Customers can register, log in, browse products, place orders and track purchases. | A centralized customer system makes shopping and order management easier. |
| Product Management  | Products are organized by categories and can be searched or filtered.              | Proper product organization helps customers find products quickly.        |
| Shopping Cart       | Customers can add or remove products before placing an order.                      | Cart management provides flexibility before checkout.                     |
| Order Management    | Customers can place orders and view order history and status.                      | Proper order management helps track purchases efficiently.                |
| Inventory           | The system maintains product stock and inventory details.                          | Inventory management helps monitor product availability.                  |
| Payment             | Customers can complete payments and receive payment information.                   | Payment management supports a complete checkout process.                  |
| Reviews & Ratings   | Customers can submit ratings and reviews after purchasing.                         | Customer feedback can provide useful information about products.          |

Administration

Administrators manage products, customers, inventory and orders.

Centralized administration supports smooth business operations.

## MAJOR PROJECT INSIGHTS

- IMPORT HUB provides a single platform for purchasing imported products.
- Customers can browse products, manage their cart and place orders.
- Product categories help organize different types of imported items.
- Inventory management helps maintain stock information.
- Order tracking allows customers to monitor their purchases.
- Administrators can manage products, customer information and orders.
- Reviews and ratings allow customers to provide feedback.
- The system is mainly focused on database management and basic e-commerce operations.

## SYSTEM MODULES

The major modules of the IMPORT HUB system are:

- Customer Management
- Product Management
- Category Management
- Shopping Cart Management
- Order Management
- Payment Management
- Admin Management
- Review and Rating Management

## FUNCTIONAL REQUIREMENTS

The system supports the following major functions:

- Customer account creation and secure login.
- Product browsing by category.
- Product searching and filtering.
- Adding and removing products from the shopping cart.
- Order placement and payment.
- Order tracking and purchase history.
- Product ratings and reviews.
- Adding, editing and removing products by administrators.
- Customer and order management by administrators.

- Product stock and inventory management.

## **NON-FUNCTIONAL REQUIREMENTS**

### **Performance**

- The website should load quickly.
- Product searches should provide results within a few seconds.
- The database should support multiple users without affecting performance.

### **Usability**

- The interface should be simple and easy to understand.
- Customers should be able to complete purchases easily.
- The website should be easy to navigate on desktop and mobile devices.

### **Security**

- Customer passwords should be stored securely.
- Payment details should be protected.
- Only administrators should be able to modify product and order information.

## **INPUT AND OUTPUT ANALYSIS**

### **Inputs**

The system accepts:

- Customer registration details
- Login credentials
- Product details
- Category information
- Shopping cart details
- Order information
- Payment details
- Customer reviews and ratings

### **Outputs**

The system generates:

- Customer account confirmation
- Product lists

- Shopping cart summary
- Order confirmation
- Payment receipt
- Order tracking details
- Customer purchase history
- Product reviews
- Inventory and sales reports

## **RECOMMENDATIONS**

- Maintain accurate product and inventory information.
- Keep customer and order records properly organized.
- Regularly update product availability.
- Provide simple product search and category navigation.
- Protect customer and payment information.
- Monitor orders and inventory through administrator reports.
- Use customer reviews and ratings to understand product feedback.

## **CONCLUSION**

The IMPORT HUB Requirement Specification defines an e-commerce database system for managing imported products and customer orders. The system brings customer management, product management, inventory, shopping cart, orders, payments and reviews together in one platform.

The project can help make online purchasing of imported products more convenient while providing administrators with an organized way to manage products, customers, inventory and orders. The system is designed mainly for educational purposes and focuses on database management and basic e-commerce operations.
